Course: Digital Electronics & Microprocessor (22SCCCS7) Class: III CS

Improvement Test Questions

1) Discuss in detail about the architecture of 8085 Microprocessor.
2) Discuss in detail the evolution of Microprocessors.
3) Explain the various registers and their uses in 8085 Microprocessor
4) Compare and contrast microcontroller, microprocessor and microcomputer, and their applications in detail.
5) Summarize briefly the instruction cycle of 8085 microprocessor.
6) A) Explain the various addressing modes of 8085 microprocessor with examples.
   B) Discuss how the instructions of 8085 are classified based on the word length.
7) Discuss in detail the arithmetic instructions of 8085 microprocessor with examples.
8) Discuss in detail the logical instructions of 8085 microprocessor with examples.
9) Explain in detail the status bits in a flag register and their uses with examples.
10) Discuss briefly the significances of assembly language and assembler. Write an assembly language program to find 2's complement of a number.
